

BALL TRANSFER UNITS

R.G.P. INTERNATIONAL s.r.l.
MANUFACTURERS OF PRECISION BALLS
ROLLERS & NEEDLE ROLLERS

COMPANY PROFILE

RGP INTERNATIONAL SRL, was founded in 1973 and is worldwide well known top player in the production of precision balls, cylindrical rollers and needles, ball transfers and different components for linear motion.

The specific strength and power of our Group is the widest range in the world of sizes, materials and grades completely available in one source of supply.

The Group is employing 420 people worldwide and the North Milan facility is employing 60 people and covers 10,000 square meters including headquarters, warehouses, logistic, workshop, quality control department.

The Company is ISO 9001:2008 as well as ISO 14001:2004 certified and our QC Dept is equipped with high tech control machines testing all technical features of our products and supplying raw material and 3.1 certificates for each batch inspected.

Our warehouses are constantly filled with more than 4,000 Tons of finished goods in order to satisfy in the shortest terms the requirements of our worldwide Customers.

RGP mission and goal is to guarantee all our Customers with the highest International Standards quality levels.

Our Engineers will be glad to suggest the most appropriate choice of materials for any specific applications.

BALL TRANSFER UNITS

RGP manufactures a wide range of ball transfer units for several applications. They can have a pressed steel or a hardened housing and they are available in different types with specific technical characteristics and different protective layers.

On specific request special types are manufactured according to customer's drawing or using different materials for a particular component (big ball, small balls, housing).

We are at complete disposal for any inquiry useful to choose the best ball transfer unit for your application.

Main ball transfer unit types:

- Light load series
- Medium load series
- Heavy load series
- Series with plastic balls
- Series with stainless steel balls
- Series with plastic balls for the chemical/medical field
- Air cargo and airport handling units series
- Series with flange
- Series without flange
- Spring loaded (retractable) series
- Series with Seeger insert clip
- Series with threaded nut
- Fixing series with internal thread
- Fixing series with screws/rivets
- Special products on specific request
- Fixing retaining rings

Materials:

- Zinc plated hardened and tempered steel
- Hardened/not hardened stainless steel
- Pressed steel housing
- Machined rod end/injection molded plastics

CONSTRUCTION

RGP ball transfer units are multi directional systems for linear handling of loads.

They are composed of a large precision ball rolling on a bed of small precision balls seated in a hardened hemispheric cup.

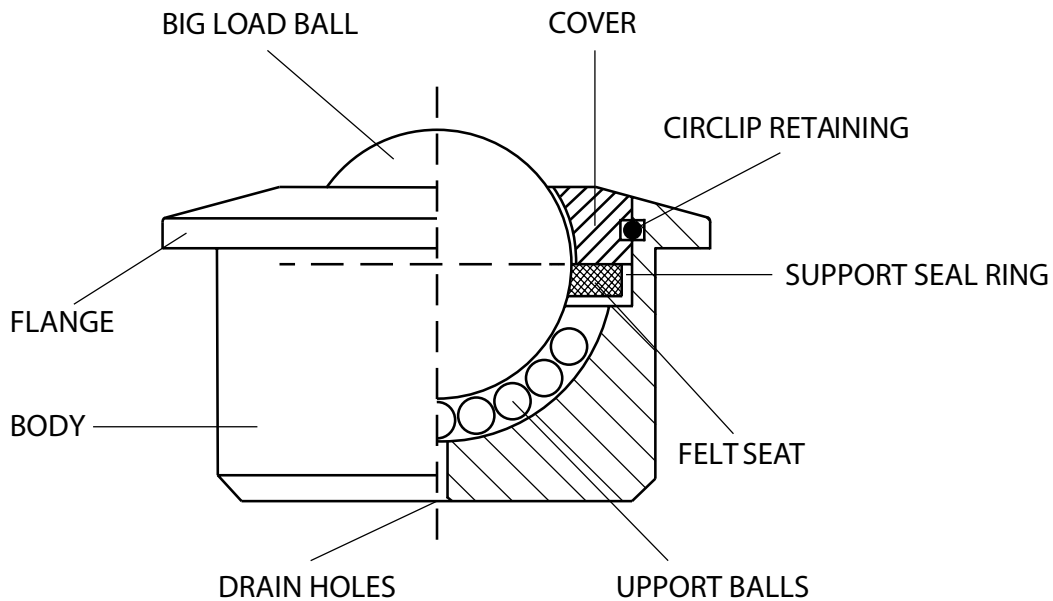

Thanks to the quality of all the manufacturing process steps for all components, friction is extremely reduced and then the strength necessary to handling loads is notably decreased.

Our production range includes different kinds of ball transfer units, starting from a main supporting ball's dimension of 8 mm to a maximum of 90 mm, with housing in steel, stainless steel, pressed metal sheet and plastic materials. They are available several types of coatings used to guarantee a good corrosion resistance for long service. Even the big ball and small balls can be

manufactured in several materials according to the final application. Then all components can be manufactured in different materials to satisfy all types of applications.

RGP manufactures mainly two versions of ball transfer units:

- **with housing in machined and hardened steel from rod** - they are usually used in presence of heavy loads, strong conditions, collisions and weighty applications in general. For very heavy loads they are available specific type expressly designed for these applications.
- **with pressed metal sheet components** - they are preferred for light loads applications. They feature both good fluency and congruous loading capacities, with a cheaper final cost.

Several types provide a felt sealing system that helps to keep clean the big ball when it rotates and avoiding that impurities come in contact with the small balls inside. There are even several holes at the bottom to favour the drain of impurities, liquids, condensate, and so on.

Usually they are supplied pre-lubricated to favour their preservation if they are not used for a long time. Further lubrications are not strictly necessary even if they can be periodically applied according to the use. For critical applications, mainly in presence of dirty and impurities, we advise to clean periodically the ball transfer unit with a common lubricant as WD-40 for example.

OPERATIVE CONDITIONS

RGP ball transfer units can be positioned in any orientation. If the big ball is oriented downwards (not conventional orientation) less loading capacities and fluency must be expected. Some types for special applications can be used only in the conventional orientation (big ball upwards). In the technical data sheets of each version loading capacity are available according to the orientation.

Working temperatures usually are from -20°C to +100°C (+70°C for continuous use, +100°C for intermittent use). These values do not affect the correct running and quality of the ball transfer units.

If the inner dust cover gasket is removed, temperatures up to +150°/200°C are possible.

For a high temperature use it is usually suggested to use a ball transfer unit with all components made of AISI

420C stainless steel, without the felt sealing system. With increasing temperature loading capacities decrease.

Ball transfer units with plastic components or fully made of plastic are useful only for applications at room temperature.

Friction coefficient of ball transfer units made of steel used in optimal conditions and in properly designed applications are:

FRICTION COEFFICIENT (expressed as % of conveyed mass)	
High Capacity	0.5 %
Medium Duty	2 %
Light Duty	3 %

COLLOCATION AND ORIENTATION

Ball size loading capacity and the effective load placed on each ball transfer unit are normally obtained by the weight or charge divided by three. The result gives the highest load which any individual ball transfer unit may sustain.

The plan leaned to the ball transfer units must be sufficiently stiff and aligned to guarantee that all ball transfer units that sustain together the same load are subjected to the same expected strength. In the same way even the surface of the load to be handled must be sufficiently stiff to avoid the damaging of the surface (grooves) during application. A suitable safety margin should be always considered.

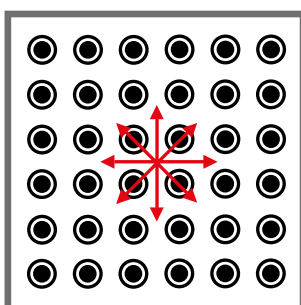

In order to determine the distance between the ball transfer units, it is necessary to divide the shortest horizontal side of the load by 3,5. For example, for a

sheet with dimensions 700x 1000 mm, the distance will be 200 mm ($700 : 3,5$). This is the distance among the units that guarantees enough ball transfer units sustain the load on the shortest side of the sheet.

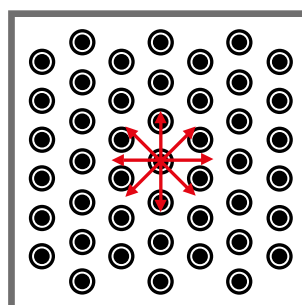

For fixing and positioning the units standard methods are used, insertion in pre-established holes or leaned on the basis, by means of screws or rivets for the types with fixing holes or by means of inner or outer threads. For the lockage in seats two types of rings are available, in the immovable or removable version. It is available even a type with insert clip at pre-established height (SPM-R) for the positioning of fixing rings according to DIN 471 standards, for the lockage in holes applied on plans with variable thick.

If required insert clips can be realized at different heights and on different types of ball transfer units.

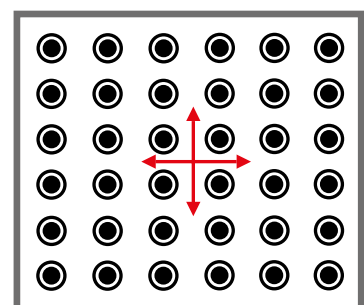

Units can be usually placed in the different ways:

A) SQUARED PITCH

B) DIAMOND PITCH

C) EXTENDED PITCH

APPLICATIONS

RGP ball transfer units are used in several applications. The most common are:

- aircraft transport cargo rolling decks
- sheet metal-working machines
- hydraulic presses
- ball transfer tables
- lifting equipments & platforms
- conveyors
- marble working machines
- ceramic tiles and bricks machines
- transporters for containers & platforms
- sliding walls
- sliding doors and windows
- robotics, electronics
- automotive racks
- moulding machines

IDENTIFICATION LABELS

SPM	heavy duty ball transfer unit with flange
SBM	heavy duty ball transfer unit without flange
SPM-R	heavy duty ball transfer unit with flange and seeger insert clip
SPS	pressed metal sheet ball transfer unit
SPP	plastic material ball transfer unit
FL	body with threaded nut
I	body with threaded hole
A	body made of bright steel and AISI 52100 chrome steel balls
B	body made of zinc plated steel and AISI 52100 chrome steel balls
C	body made of zinc plated steel and AISI 420C stainless steel balls
BD	body made of zinc plated steel, big ball made of plastic material and small balls made of AISI 52100 chrome steel
CD	body made of zinc plated steel, big ball made of plastic material and small balls made of AISI 420C stainless steel
SS	body and all balls made of AISI 420C stainless steel
CARGO	body made of zinc plated metal with sealing coating all balls made of AISI 420C stainless steel
CX	body made of zinc plated metal with inner ball race and all balls made of AISI 420C stainless steel
AF	spring loaded body made of burnished steel with all balls made of AISI 52100 chrome steel
BF	spring loaded body made of zinc plated steel with all balls made of AISI 52100 chrome steel
CF	spring loaded body made of burnished steel with all balls made of AISI 420C stainless steel

BALL TRANSFER UNITS

"SPM" HEAVY DUTY TYPE WITH UPPER FLANGE

Housing with upper flange made of machined and hardened steel.
Machined steel cover cap.*
Felt sealing system.**
Self cleaning bottom hole.
Housing available in steel, zinc plated steel, stainless steel.
Chrome steel, AISI 420C stainless steel, plastic material balls.

* For SPM 12 – 15 – 25 in pressed metal sheet.

** Except SPM 12 – 15 – 25 and types with the large ball in plastic material.

p. 10-11

"SPM" HEAVY DUTY TYPE SEEGER INSERT CLIP DIN 471

Housing with upper flange made of machined and hardened steel.
Insert clip for fixing ring DIN 471.
Machined steel cover cap.*
Felt sealing system.**
Self cleaning bottom hole.
Housing available in steel, zinc plated steel, stainless steel.
Chrome steel, AISI 420C stainless steel, plastic material balls.

* For SPM 15 – 25 in pressed metal sheet.

** Except SPM 15 and types with the large ball in plastic material.

p. 12

"SPM-SBM" SUPER HEAVY DUTY TYPE FOR HEAVY LOADS

Housing made of high performance machined, case hardened and hardened steel.
Machined steel removable cover cap.*
Felt sealing system.**
Self cleaning bottom hole.
Housing available in steel, zinc plated steel, stainless steel.
Chrome steel, AISI 420C stainless steel balls.

* Except SPM 60.

p. 13

"SPM CARGO" HEAVY DUTY TYPE FOR AIR CARGO, DEPOSIT, AND AIRPORT HANDLING UNITS

Housing with upper flange in machined and hardened steel.
Machined steel cover cap.
Without felt sealing system to guarantee a better fluency and less friction.
Basis steel at the bottom with several holes to favour the drain of condensate and impurities
Housing available even in zinc plated steel with sealing coating to increase corrosion resistance, and on stainless steel.
Balls made of AISI 420C stainless steel.

p. 14

"SPM CX" HEAVY DUTY TYPE FOR AIR CARGO, DEPOSIT, AND AIRPORT HANDLING UNITS

Housing and cover cap in machined steel.
Felt sealing system.*
Inner ball race in AISI 420C hardened stainless steel, with a hole at the bottom to allow the drain of condensate and impurities.
Housing available even on zinc plated steel, stainless steel
Balls made of AISI 420C stainless steel.

* Available even without felt sealing system if required.

p. 15

"SBM" HEAVY DUTY TYPE WITHOUT FLANGE

Housing without flange in machined and hardened steel.
Machined steel cover cap.*
Felt sealing system.**
Available in steel, zinc plated steel, stainless steel.
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

* SBM 8 – 12 in pressed metal sheet.

** Except SBM 8 – 12 – 15 and types with the large ball in plastic material.

p. 16

"SBM-SPM" HEAVY DUTY TYPE WITH THREADED NUT

Housing in machined and hardened steel.
Turned threaded stud.*
Pressed metal sheet cover cap.
Without felt sealing system to guarantee a better fluency.
Available in steel, zinc plated steel, stainless steel.
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

* Standard dimension M8 x 15/20 mm. If required available in different dimensions.

p. 17

"SBM" HEAVY DUTY TYPE WITH INNER THREAD

Housing without flange in machined and hardened steel.
Inner thread at the bottom for fixing by means of screws or threaded rods.
Machined steel cover cap.*
Felt sealing system.**
Available in steel, zinc plated steel, stainless steel.
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

* SBM 12 in pressed metal sheet.

** Except SBM 12 - 15 and types with the large ball in plastic material.

p. 18

SPRING LOADED "SPM" HEAVY DUTY TYPE

External housing in machined and burnished steel.
Fully machined, hardened and zinc plated steel inner ball transfer unit.
Felt sealing system.
Inner spiral spring.
Available in burnished steel, stainless steel.
Balls made of chrome steel, stainless steel AISI 420C.
Fully detachable.

p. 19

"SPS" TYPE LIGHT DUTY TYPE

Housing and cover cap in zinc plated pressed metal sheet.*
Inner ball race in pressed and hardened steel.*
Felt sealing system.**
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

* Available even with all components made of stainless steel.

** Except SPS 15 and types with the large ball in plastic material.

p. 20-21

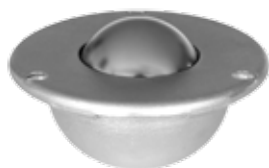

"SPS DV" TYPE IN PRESSED METAL SHEET WITH FIXING HOLES

Housing in hardened and zinc plated pressed metal sheet.
Holes on the flange for fixing by means of screws or rivets.
Without felt sealing system to guarantee a better fluency.
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

p. 22

"SPS SC" TYPE IN PRESSED METAL SHEET WITH FIXING HOLES

Housing in hardened and zinc plated pressed metal sheet.
Holes on the flange for fixing by means of screws or rivets.
Felt sealing system.
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

p. 23

"SPP" TYPE IN PLASTIC MATERIAL

Housing and cover cap in acetal resin (POM) machined from rod end.
Without felt sealing system to guarantee a better fluency.
Drain hole at the bottom.
Balls made of plastic material or AISI 316 stainless steel.

p. 24

"SPP" TYPE MADE OF PLASTIC MATERIAL WITH METAL INNER BALL RACE

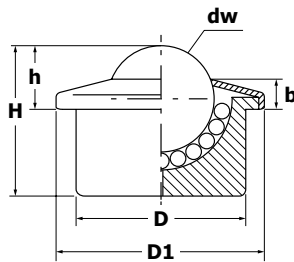

Housing and cover cap in pressed PVC.
Pressed steel and hardened inner ball race.
Without felt sealing system to guarantee a better fluency.
Balls made of chrome steel, AISI 420C stainless steel, plastic material.

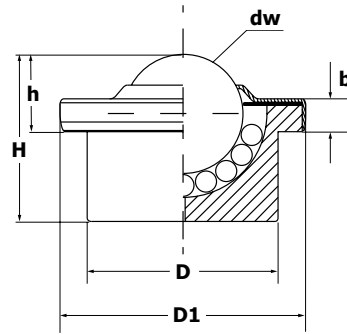

p. 25

"SPM" heavy duty type with flange

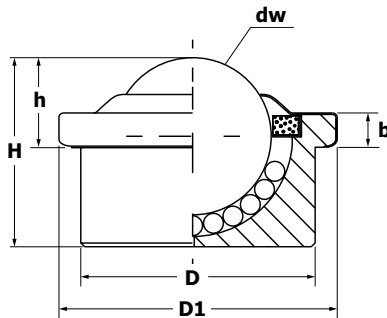

SPM 12

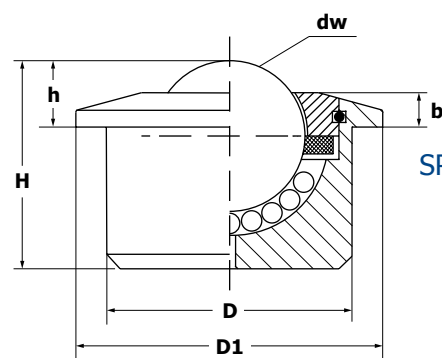

SPM 15

SPM 25

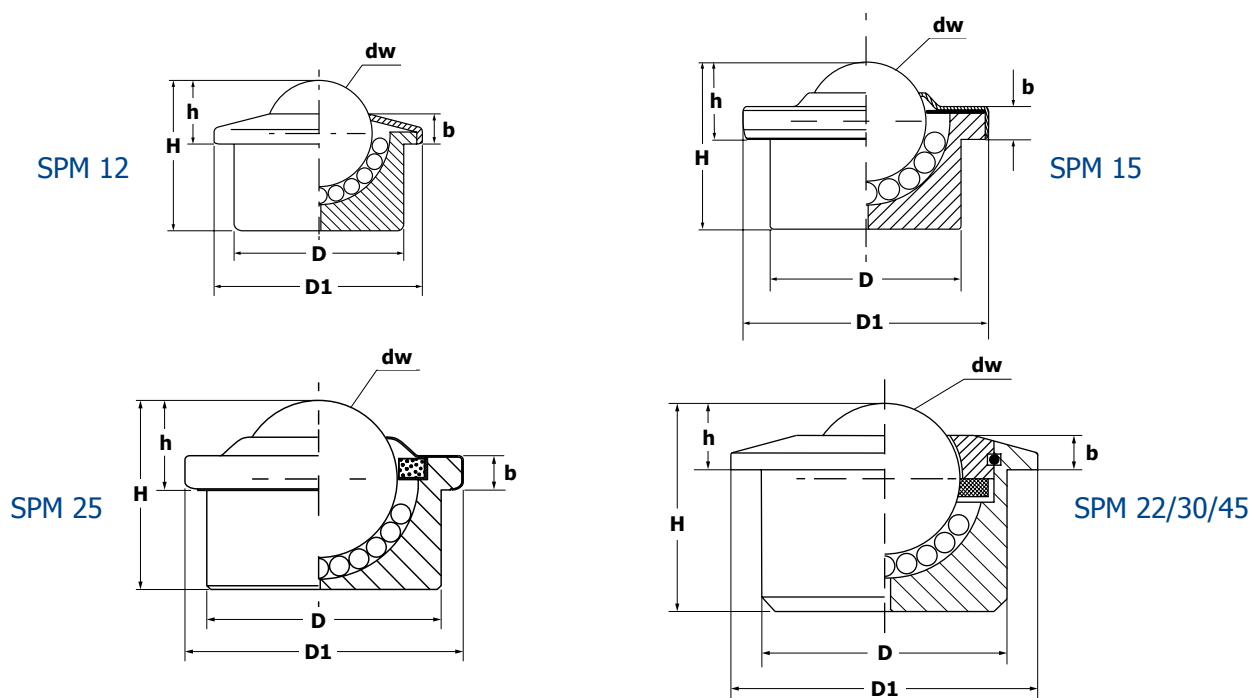

SPM 22/30/45

- Housing with flange made of machined from rod and hardened steel, to guarantee high load capacities and higher resistance to strong conditions.
- Reinforced cover cap made of machined steel (for SPM 12, 15 and 25 types made of pressed metal sheet).
- Felt sealing system (except for SPM 12 and 15).
- Drain hole at the bottom.

“SPM” heavy duty type with flange and big ball in plastic material

- Housing with flange made of machined from rod and hardened steel, to guarantee high load capacities and higher resistance to strong conditions.
- Reinforced cover cap made of machined steel (for SPM 12, 15 and 25 types made of pressed metal sheet).
- Drain hole at the bottom.
- Version with the big ball made of plastic material:
 - to handling particularly gentle surfaces as glass or crystal sheets, wood panels, painted or glazed pressed metal sheets, and so on;*
 - to guarantee a good fluency even in presence of light loads, the felt sealing system is not present;
 - usually they are not suitable in applications with the big ball downwards;*
 - working temperatures 0°/60°.*

“SBM-SPM” Super heavy duty type for high loads

- Housing made of high performance machined from rod, case hardened and hardened steel.
- They guarantee high load capacities and higher resistance to strong conditions.
- Reinforced cover cap made of machined steel detachable for facultative maintenance works (except SPM 60)
- Felt sealing system.
- Drain hole at the bottom.

“SPM” heavy duty “CARGO” type

- Housing with flange made of machined from rod and hardened steel, to guarantee high load capacities and higher resistance to strong conditions.
- They are particularly suggested for use in airport implants, deposits, airport handling units and so on.
- Housing made of zinc plated steel with sealing coating to increase corrosion resistance.
- Reinforced cover cap made of machined steel.
- To guarantee highest fluency in all working conditions, the felt sealing system is not scheduled.
- Stainless steel disc with seven drain holes at the bottom to favour the draining of condensate, powder, impurities.

“SPM” heavy duty “CX” type

- Housing with flange made of machined from rod and hardened steel, to guarantee high load capacities and higher resistance to strong conditions.
- They are particularly suggested for use in airport implants, deposits, airport handling units and so on.
- Inner ball race made of AISI 420C hardened stainless steel and 1/5 drain holes at the bottom.
- Reinforced cover cap made of machined steel.
- Felt sealing system (if required they can be supplied without gasket to guarantee a better fluency).
- All the listed versions can be manufactured with an insert clip for the insertion of a fixing ring according to DIN 471, at the wished height.

“SBM” heavy duty type without flange

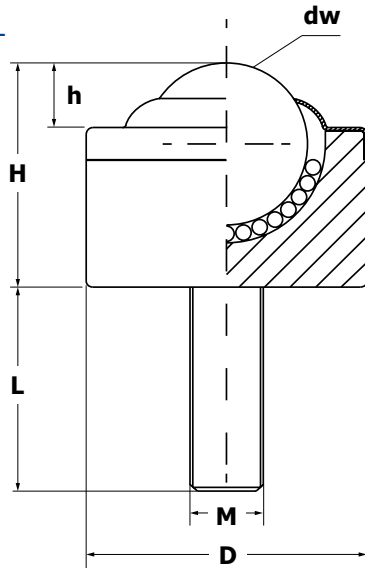

- Housing without flange made of machined and hardened steel.
- Cover cap made of machined steel (SBM 12 made of pressed metal sheet).
- Useful for applications where it is important to reduce to the minimum extent the overhang of the housing seat.
- To guarantee a good fluency even in presence of small loads, SBM 8, 12 and 15 and all versions with the big ball made of plastic material are manufactured without the felt sealing system.
- Drain hole at the bottom.
- Big ball made of plastic material: working temperatures 0°/60°.*

“SBM-SPM” heavy duty type with threaded nut

SBM 8/12 FL

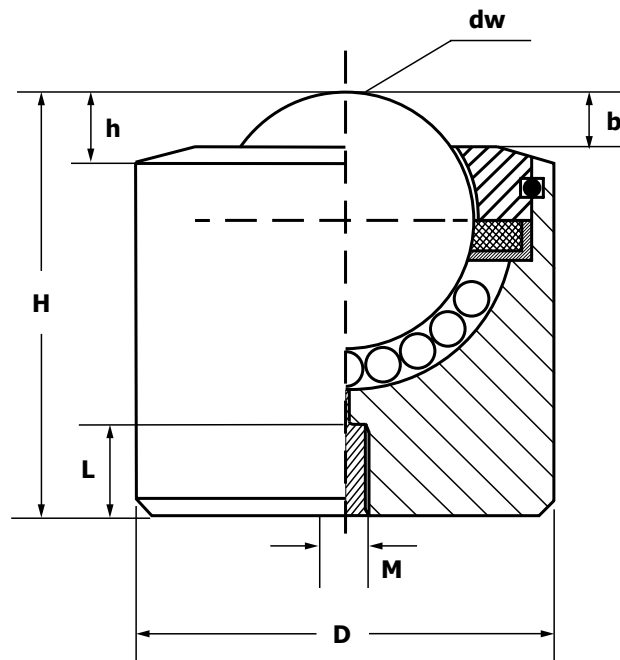

SPM 15 FL

- Housing made of machined from rod and hardened steel.
- Turned threaded stud available if required with a diameter and length different from the standard values listed on the table below.
- Pressed metal sheet cover cap.
- To guarantee the highest fluency even in presence of light loads, the felt sealing system is not present.
- Version with the big ball made of plastic material:
 - is particularly suitable to handle gentle surfaces as glass or crystal sheets, wood panels, painted or glazed pressed metal sheets, and so on;*
 - usually they are not suitable in applications with the big ball downwards;*
 - working temperatures 0°/60°.*

“SBM” heavy duty type without flange with inner thread

- Housing without flange made of machined and hardened steel.
- Cover cap made of machined steel (SBM 12 made of pressed metal sheet).
- Useful for applications where it is important to reduce to the minimum extent the overhang of the housing seat.
- To guarantee a good fluency even in presence of small loads, SBM 12 and 15 types and types with the big ball made of plastic material are manufactured without the felt sealing system.
- The threaded hole at the bottom allows to fix the ball transfer unit with an effective seal on all operative conditions.
- Big ball made of plastic material to handling: working temperatures 0°/60°.*

Spring loaded "SPM" heavy duty type

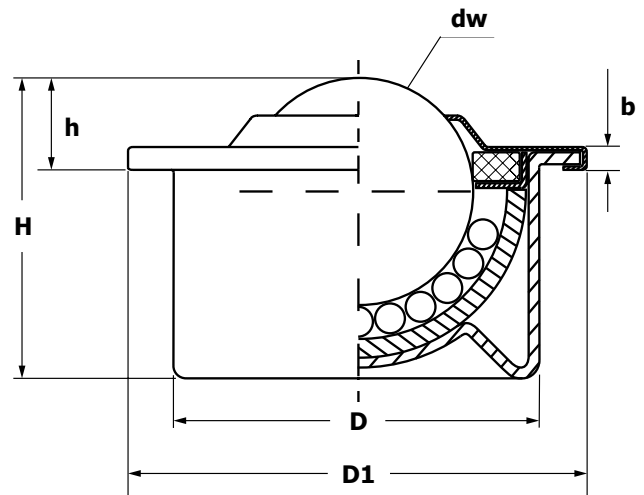

- External housing in machined from rod and burnished steel.
- This type guarantees consistency and keep the main characteristics with use avoiding inflections typical of the pressed metal sheet.
- Fully machined, hardened and zinc plated steel inner ball transfer unit.
- Felt sealing system and drain hole at the bottom.
- Hardened and grinded spiral spring.
- Lockage of the ball transfer unit by means of the removable fixing ring, for facultative maintenance and/or replacement of the inner spring.

“SPS” pressed metal sheet type

SPS 12/15

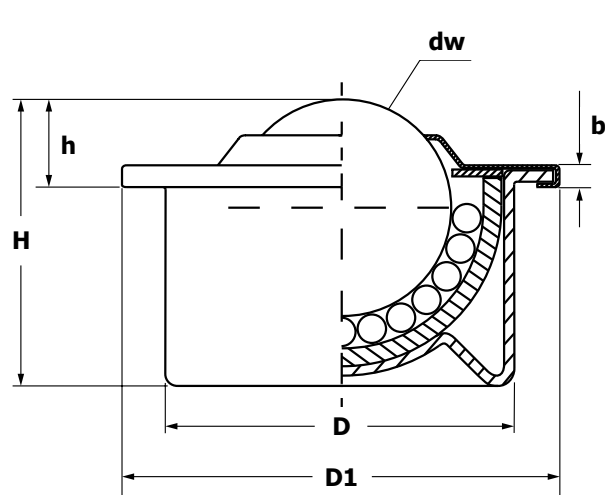

SPS 22/30/45

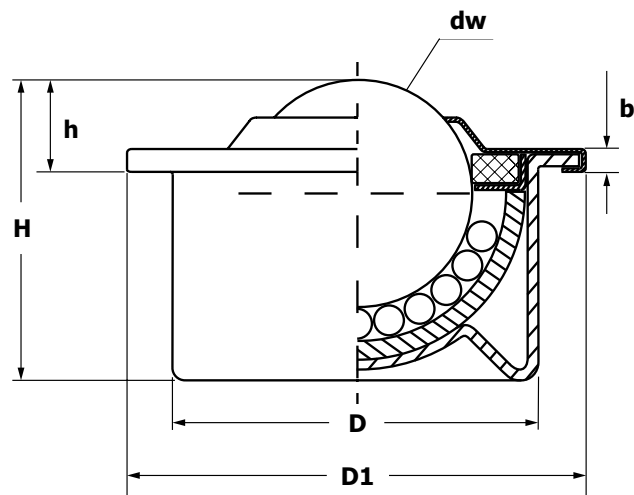

- Dimensionally interchangeable with SPM types, they guarantee good fluency and higher lightness at cheaper price.
- Housing and cover cap made of pressed metal sheet.
- Inner ball race made of machined and hardened steel.
- Felt sealing system (except for SPS 12 and 15).

SPS 15

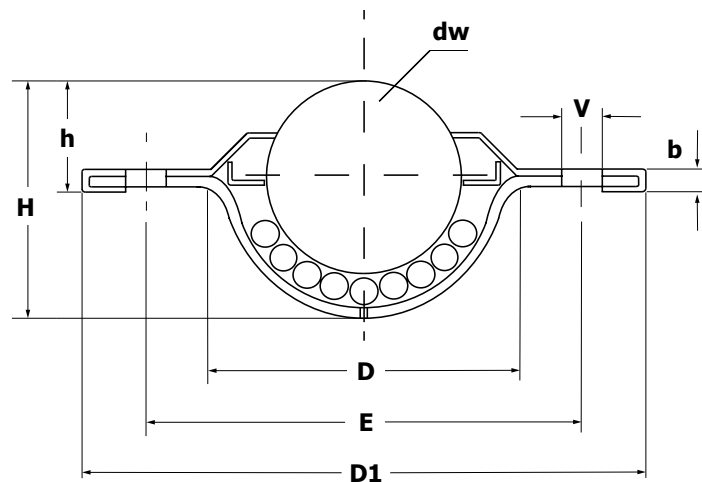

SPS 22/30/45

- Dimensionally interchangeable with SPM types, they guarantee good fluency and higher lightness at cheaper price.
- Housing and cover cap made of pressed metal sheet.
- Inner ball race made of machined and hardened steel.
- Version with the big ball made of plastic material:
 - to handling particularly gentle surfaces as glass or crystal sheets, wood panels, painted or glazed pressed metal sheets, and so on;*
 - to guarantee a good fluency even in presence of light loads, the felt sealing system is not present;*
 - usually they are not suitable in applications with the big ball downwards;*
 - working temperatures 0°/60°.*

“SPS DV” pressed metal sheet type with fixing holes

- Housing in hardened and zinc plated pressed metal sheet.
- Holes on the flange for fixing by means of screws or rivets.
- To guarantee a better fluency, the felt sealing system is not present.
- Version with the big ball made of plastic material:
 - is particularly suitable to handle gentle surfaces as glass or crystal sheets, wood panels, painted or glazed pressed metal sheets, and so on;*
 - working temperatures 0°/60°.*

“SPP” type made of plastic material

SPP 15

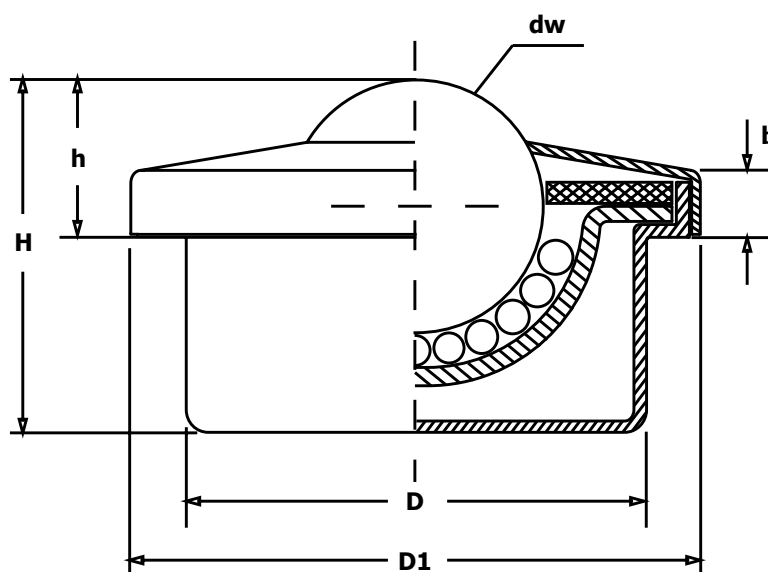

SPP 22/30/45

- Housing with flange made of acetal resin (POM) machined from rod end.
- To guarantee a good fluency even in presence of light loads and avoid a possible absorption of liquids, the felt sealing system is not scheduled.
- Drain hole at the bottom.
- They resist in contact with salt water and chemical substances.
- They are even not conductive and not magnetic.
- They are useful for applications in the chemical,, pharmaceutical and medical fields.
- All the listed versions can be manufactured with an insert clip for the insertion of a fixing ring according to DIN 471.
- Working temperatures 0°/60°.

ON DEMAND

The wide range of RGP ball transfer units satisfy almost all possible applications of these devices.

On specific demand, special types can be manufactured to meet all the required uses. The choice of types of materials for all components (big ball, small balls, housing), of coatings, of technical and dimensional properties allows to manufacture balls transfer units for special applications.

Our technical department is a complete disposal for any inquiry useful to choose the best ball transfer unit according to the required application.

THE "RGP" GROUP

Founded in 1973 as manufacturers of precision cylindrical rollers & needle rollers, precision balls and ball transfer units.

- Headquarters in Italy on 10.000 square meters.
- 420 workers worldwide.
- ISO 9001 & ISO 14001 certified.
